

TAPFLO CASE STUDY: PUMP FOR COUGH SYRUP

PUMP FOR COUGH SYRUP

TX444 S the largest in Tapflo aseptic diaphragm pumps series.

This unit finds use in pharmaceutical industry to meet high flow requirements when transferring viscous mixture of glucose syrup and honey during cough syrup production.

Owing to its special design TX444 meets EHEDG regulations. The EHEDG (European Hygienic Engineering & Design Group) certificate guarantees that the design is according to the hygienic guidelines. Furthermore the pump is clean ability tested, which means bacteria does not grow in the pump after cleaning and draining procedure.
